# Performance maintained, beauty enhanced

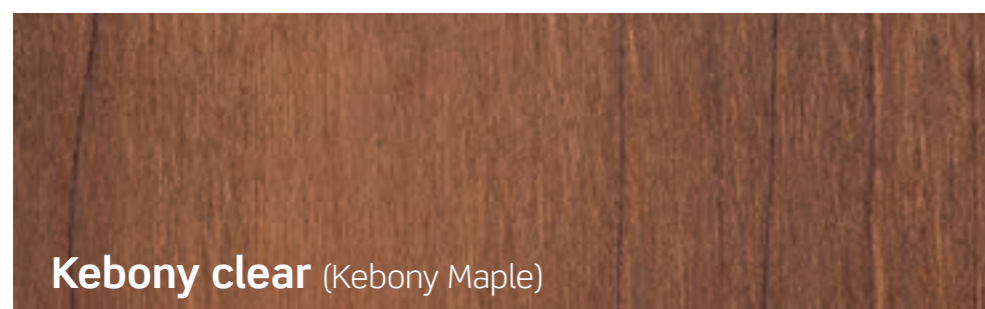

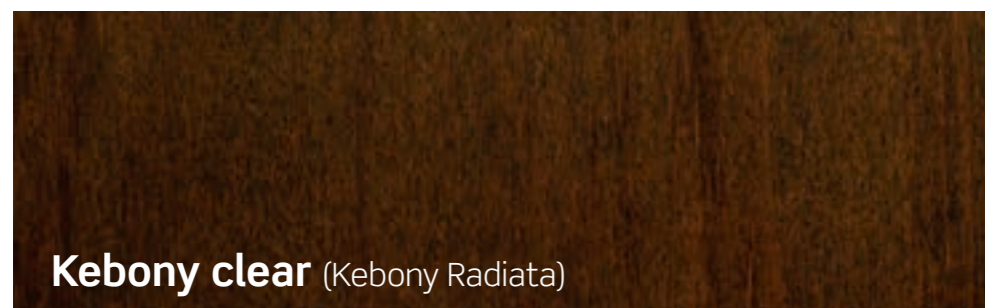

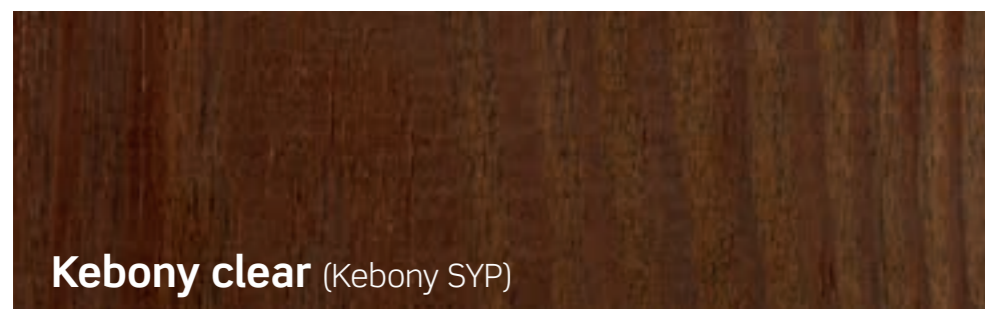

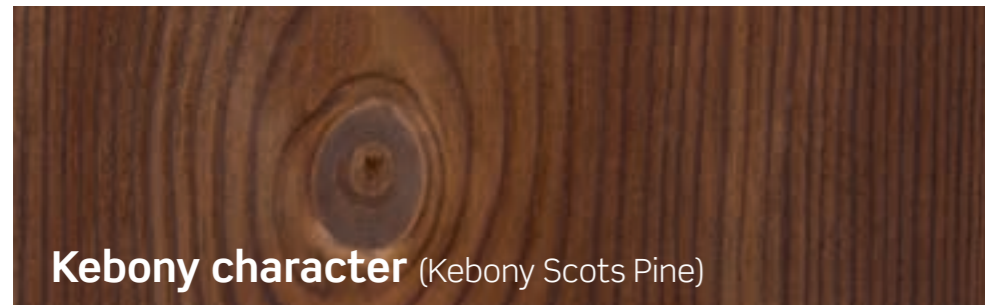

Kebony is the only sustainable alternative to tropical hardwood when beauty and performance are essential.

Developed in Norway, the Kebony technology is an environmentally friendly, patented process, which enhances the properties of sustainable softwood with a bio-based liquid.

The process permanently modifies the wood cell walls giving Kebony premium hardwood characteristics and a deep rich brown colour.

After exposure to sun and rain the wood develops a natural silver-gray patina. Performance is maintained while beauty is enhanced.

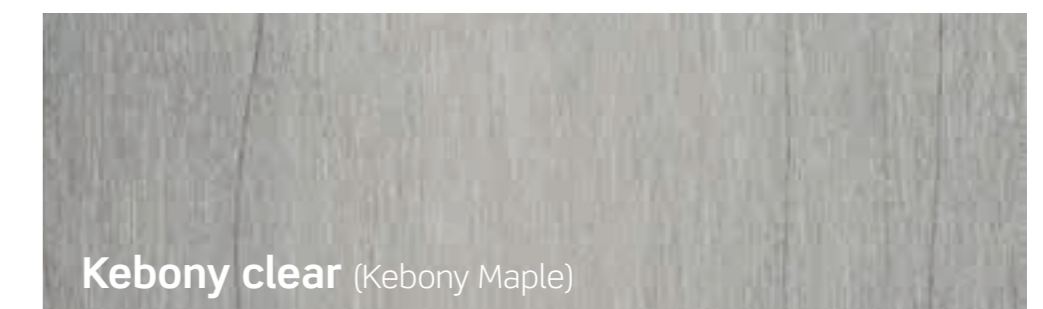

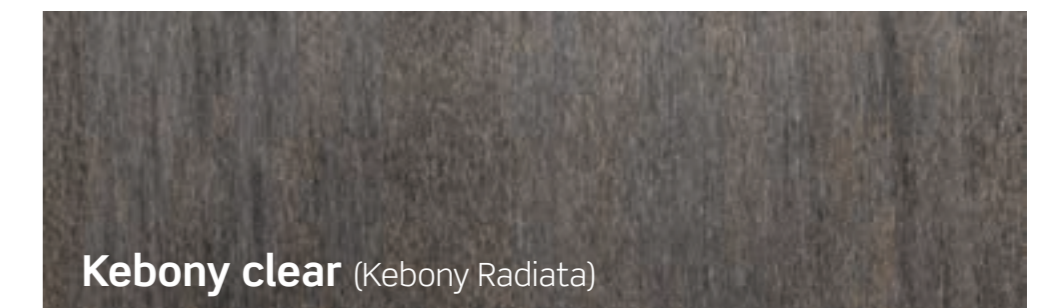

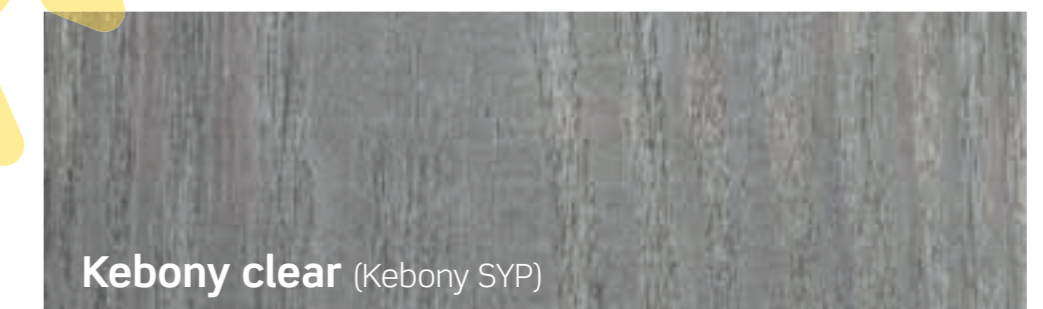

## New wood

The **Beach Pavilion Bexhill-on-Sea** in Sussex / UK. The pictures show how the elements have given the wood a beautiful patina.  
**Below left: NEW WOOD. Right: WEATHERED.**

## Weathered

## CREDITS & THANKS

**We express our sincere gratitude to all partners and friends who have contributed to this book with their outstanding projects and give credit as well as appreciation to all photographers.**
